

SHUOFAN ZHANG

EDUCATION ♦ 2009 – 2013, Bachelor of International Business, Shanghai Customs College, China

Highest mark achieved in the cohort:

Advanced Mathematics I, Linear Algebra, Probability and Statistics, Programming Language, International Finance.

♦ 2016 – 2018, Master of Applied Econometrics, Monash University, Australia

Highest mark achieved in the cohort:

Probability and Statistical Inference for Economics and Business, Statistics of Stochastic Processes, Principles of Econometrics, Microeconomics, Applied Econometrics, Applied Econometrics II, Financial Econometrics, Financial Econometrics II.

RESEARCH INTERESTS Econometrics

WORK HISTORY 2013 – 2016, Shanghai
MSH China, Health Insurance Services & Solutions
Main duties: Risk management, Pre-authorization evaluation; Translation.

MASTER'S THESIS ♦ Can we train the computer to read residual plots? (Working Paper)
February 2018 – June 2018
Authors: *Shuofan Zhang, Dianne Cook*

This thesis develops a computer vision model to read residual plots. It compares results with a large database of human evaluations as well as the conventional distribution tests. This innovative methodology of performing hypothesis tests could avoid the complex derivations of conventional distribution tests, while exploiting the useful information in the residual plots. Its potential is supported by the satisfactory accuracy achieved in this study.

RESEARCH ASSISTANCE ♦ Co-integration and high-dimensional forecasting
June 2018 – present
Research Supervisors: *Heather Anderson, Farshid Vahid*

This work is exploring the use of LASSO (Least Absolute Shrinkage and Selection Operator) in a predictive regression to identify co-integrating relationships that will potentially improve the prediction of GDP growth, inflation and bond returns.

◆ Student voice as feedback: An instrument to measure student perceptions of live streaming technologies (Working Paper)

August 2018 – present

Authors: *Mike Bryant, Mariko Francis, Trevor Wood, Shuofan Zhang, Kris Ryan*

This study adapted the CRiSP questionnaire (Richardson et al. 2014) to measure student levels of perceptions of live-streaming. A combination of factor analysis and item response theory was employed to examine item and scalar equivalence in order to validate the instrument. Our paper presents the overarching framework and describes the adapted and validated CRiSP instrument.

TEACHING
ASSOCIATE

Semester Two, 2018

ETC3410/BEX3410/ETC5341: Applied Econometrics

ETC2520/BEX2520/ETC5252: Probability and Statistical Inference for Economics and Business

AWARDS
AND
HONOURS

2010 Shanghai Customs College Academic Progressive Award

2011-2012 Shanghai Customs College Scholarship

2016 and 2017 Monash Business School Student Excellence Award

2018 Econometric Game in University of Amsterdam
